**5** \_\_\_\_\_ is invoked to create an object.

- A. A constructor
- B. The main method
- C. A method with a return type
- D. A method with the void return type

**6** Which of the following statements are true?

- A. A default constructor is provided automatically if no constructors are explicitly declared in the class.
- B. At least one constructor must always be defined explicitly.
- C. Every class has a default constructor.
- D. The default constructor is a no-arg constructor.

**7** Which of the following statements are true?

- A. Multiple constructors can be defined in a class.

- B. Constructors do not have a return type, not even void.
- C. Constructors must have the same name as the class itself.
- D. Constructors are invoked using the new operator when an object is created.

## **Questions on Multi-Dimensional Arrays**

**8** Which of the following statements are correct?

- A. char[][] charArray = {'a', 'b'};
- B. char[2][2] charArray = {{'a', 'b'}, {'c', 'd'}};
- C. char[2][] charArray = {{'a', 'b'}, {'c', 'd'}};

- B. a[1][1]
- C. a[0][1]
- D. a[1][0]

**12** Analyze the following code:

```
public class Test {
    public static void main(String[] args) {
        boolean[][] x = new boolean[3][];
        x[0] = new boolean[1]; x[1] = new boolean[2];
        x[2] = new boolean[3];

        System.out.println("x[2][2] is " + x[2][2]);
    }
}
```

- A. The program has a compile error because new boolean[3][] is wrong.
- B. The program has a runtime error because x[2][2] is null.
- C. The program runs and displays x[2][2] is null.
- D. The program runs and displays x[2][2] is true.
- E. The program runs and displays x[2][2] is false.

        for (int[] list : values)
            for (int element : list)
                if (v > element)
