

## Ecology Lab #8 – Top Down SimBio Assignment

This assignment will be based on your results from the exercise called Extension: The Fourth Dimension. Write a letter to the editor of the local newspaper about the changes to the lake community that are likely to occur if trout are added. Take a stance, for or against trout addition, and be clear about why you chose it. Justify your stance with the information from your experiment (make sure you report the data you collected). The letter should be written for the general public, so explain any scientific terms, but as always be clear and use proper grammar. (10 pts)
