

Intelligent Agents

Chapter 2

Vacuum-cleaner world

Percepts: location and contents, e.g., [*A*, *Dirty*]

Actions: *Left*, *Right*, *Suck*, *NoOp*

A vacuum-cleaner agent

Percept sequence	Action
$[A, \textit{Clean}]$	$\textit{Right}$
$[A, \textit{Dirty}]$	$\textit{Suck}$
$[B, \textit{Clean}]$	$\textit{Left}$
$[B, \textit{Dirty}]$	$\textit{Suck}$
$[A, \textit{Clean}], [A, \textit{Clean}]$	$\textit{Right}$
$[A, \textit{Clean}], [A, \textit{Dirty}]$	$\textit{Suck}$
$\vdots$	$\vdots$

function REFLEX-VACUUM-AGENT([*location,status*]) **returns** an action

if *status* = *Dirty* **then return** *Suck*

else if *location* = *A* **then return** *Right*

else if *location* = *B* **then return** *Left*

What is the **right** function?

Can it be implemented in a small agent program?

Rationality

Fixed **performance measure** evaluates the **environment sequence**

- one point per square cleaned up in time T ?
- one point per clean square per time step, minus one per move?
- penalize for $> k$ dirty squares?

A **rational agent** chooses whichever action maximizes the **expected** value of the performance measure **given the percept sequence to date**

Rational $\neq$ omniscient

Rational $\neq$ clairvoyant

Rational $\neq$ successful

Rational $\Rightarrow$ exploration, learning, autonomy

PEAS

To design a rational agent, we must specify the **task environment**

Consider, e.g., the task of designing an automated taxi:

Performance measure??

Environment??

Actuators??

Sensors??

PEAS

To design a rational agent, we must specify the **task environment**

Consider, e.g., the task of designing an automated taxi:

Performance measure?? safety, destination, profits, legality, comfort, . . .

Environment?? US streets/freeways, traffic, pedestrians, weather, . . .

Actuators?? steering, accelerator, brake, horn, speaker/display, . . .

Sensors?? video, accelerometers, gauges, engine sensors, keyboard, GPS,

. . .

The environment type largely determines the agent design

The real world is (of course) partially observable, stochastic, sequential, dynamic, continuous, multi-agent

Agent types

Four basic types in order of increasing generality:

- simple reflex agents
- reflex agents with state
- goal-based agents
- utility-based agents

All these can be turned into learning agents

Simple reflex agents

Reflex agents with state

Goal-based agents

Utility-based agents

Learning agents
