## CS194A Assignment #1: Tip Calculator

**Project due**: Sunday, October 17, 11:59pm (California time) **Partner feedback due**: Wednesday, October 20 at 5:00pm (California time)

There are three parts to this assignment:

- 1. Use the walkthrough video to complete a basic working version of the app.
- 2. Complete at least one extension. There are several ideas below.
- 3. Look over the submission from your assigned partner and provide feedback.

**Description**: We're going to build a simple tip calculator app! Your app will have two inputs:

- Bill amount (total amount to tip on)
- Tip percentage (what % the user wants to tip)

Walkthrough video: Android Tip Calculator (~1 hour of content)

## App screenshot:

TIPPY	
Base	83.15
24%	Great
Tip	19.96
Total	103.11
	MADE WITH 🤎 BY RAHUL
	•

**Extension ideas**: You should complete at least one extension beyond the walkthrough video. Here are some ideas:

- Change the color scheme of the app, e.g. the background/primary/secondary color.
  - Modify the theme at app/src/main/res/values/theme.xml
- Replace the text describing the tip ("poor", "good", etc) with emojis.
- Improve the user interface through styling and coloring, e.g. change the text color, font, optimize the layout for different screens. See the <u>styling screens</u> FAQ.
- Add the ability to split the bill across any number of people.
- Add the ability to round the total bill up or down, which should update the tip amount and percent automatically.
- Add pre-defined options for service (e.g. poor, acceptable, good, excellent) which automatically decide the tip percentage.
- (Advanced) Show currency symbols, and allow the user to change their currency.
  - Store the currency in <u>SharedPreferences</u>
- (Advanced) Add another screen to the app where you can see tips made in the past.
  - Use intents to add another screen to your app.
- Ideas for further inspiration: here's a <u>published</u> tip calculator app.

## Submission instructions:

- Include a README.md file in your Github repo which contains a GIF walkthrough of your app. Use this <u>README.md template</u>.
- Submit the Github repository URL for the assignment on <u>Canvas</u>.
- After the due date, give your partner feedback about their project in Canvas. Answer the following questions:
  - What extensions did your partner complete?
  - What did you like about this project? What improvements can you suggest?
